CMPE 202 Personal Project Spring '16 Libraries-Koushik Ram

Software used: I have used Java parser jar to extract the information about classes, methods, fields, dependencies etc. And using java made a meaningful string that can be passed to Plantuml jar to create the Uml class diagram.

1) Open the command prompt where you have kept the umlgen.jar file.

 2) Run the following command java -jar umlgen.jar "<path_of_testcase_files>" java -jar umlgen.jar "C:\Users\Koushik\Desktop\202\uml-parser-test-5"
